

VITYARTHI PROJECT

REPORT

THE ASSIGNMENT ENTERED IN THIS REPORT HAVE BEEN
SATISFACTORILY PERFORMED BY

Registration No : 25BCY10089
Name of Student : PRIYAL MAHESHWARI
Course Name : Fundamentals in AI and ML
Course Code : CSA2001
School Name : SCAI
Slot : C21 + F11 + F12
Class ID : BL2025260100824
Semester : FALL 2025/26

Course Faculty Name : Dr. Vishnuvarthanan

Signature:

Practical Index

Sr. No.	Topic	Date of submission	Signature of Faculty
1.	Making a simple tax calculator using if conditional statements to segmentize different tax rates for different income brackets.	25/11/2025	

Practical No: 1

Date: 24/11/25

TITLE: Simple Tax Calculator

AIM/OBJECTIVE(s):

1. To understand if conditional statement usage in python.
2. To understand proper indentation blocks to avoid repeatedly printing of outputs.

METHODOLOGY & TOOL USED:

```
import time
```

```
first_tax_rate= 0.12
```

```
Second_tax_rate= .18
```

```
third_tax_rate= .28
```

```
no_tax_rate= 0
```

```
st = time.perf_counter()
```

```
Income= float(input("Please enter your income for tax to be calculated: "))
```

```
TDS= float(input("Enter if TDS paid"))
```

```
TDS_rate= 0.10
```

```
if Income <= 1200000.00:
```

```
    tax_rate = no_tax_rate
```

```
    Tax_calculated = Income*tax_rate
```

```
    print("No tax to be paid")
```

```
if 2500000.00 > Income > 1200000.00:
```

```
tax_rate= first_tax_rate
```

```
Tax_calculated = Income*first_tax_rate
```

```
print(f"Tax Rate in your income slab is: {tax_rate:,.2f}")
```

```
print(f"Tax calculated in income is: {Tax_calculated:,.2f}")
```

```
if 3500000.00 > Income >= 2500000.00:
```

```
tax_rate = Second_tax_rate
```

```
Tax_calculated = Income*tax_rate
```

```
print(f"Tax Rate in your income slab is: {tax_rate:,.2f}")
```

```
print(f"Tax calculated in income is: {Tax_calculated:,.2f}")
```

```
if Income >= 3500000.00:
```

```
tax_rate = third_tax_rate
```

```
Tax_calculated = Income*tax_rate
```

```
print(f"Tax Rate in your income slab is: {tax_rate:,.2f}")
```

```
print(f"Tax calculated in income is: {Tax_calculated:,.2f}")
```

```
if TDS >= 0:
```

```
TDS_amount = TDS*TDS_rate
```

```
print(f"TDS to be credited when filing annual income tax  
return:{TDS_amount:,.2f}")
```

```
Income_inhand = Income - Tax_calculated - TDS_amount
```

```
print(f"Total income in hand after taxes:{Income_inhand:,.2f}")
```

```
et = time.perf_counter()
```

```
tt = et - st
```

```
print(f"Program execution time:{tt:,.2f} seconds")
```

BRIEF DESCRIPTION:

- The core logic relies on defining specific income thresholds (tax brackets) and applying a corresponding tax rate to the portion of income that falls within that bracket.
- Conditional Logic: Uses if statements to check which tax rate bracket the income belongs to.
- Progressive Tax: Tax rates increase as the income amount increases

RESULTS ACHIEVED:

```
PS C:\Users\Priyal> & C:/Users/Priyal/AppData/Local/Programs/Python/Python313/python.exe "c:/Users/Priyal/OneDrive/Desktop/import time.py"
Please enter your income for tax to be calculated: 1520003
Enter if TDS paid: 51200
Tax Rate in your income slab is: 0.12
Tax calculated in income is: 182,400.36
TDS to be credited when filing annual income tax return:5,120.00
Total income in hand after taxes:1,332,482.64
Program execution time:7.86 seconds
PS C:\Users\Priyal> & C:/Users/Priyal/AppData/Local/Programs/Python/Python313/python.exe "c:/Users/Priyal/OneDrive/Desktop/import time.py"
Please enter your income for tax to be calculated: 1000300
Enter if TDS paid: 210
No tax to be paid
TDS to be credited when filing annual income tax return:21.00
Total income in hand after taxes:1,000,279.00
Program execution time:6.95 seconds
PS C:\Users\Priyal> |
```

RESULTS:

**PS C:\Users\Priyal> &
C:/Users/Priyal/AppData/Local/Programs/Python/Python313/pyth
on.exe "c:/Users/Priyal/OneDrive/Desktop/import time.py"**

Please enter your income for tax to be calculated: 1520003

Enter if TDS paid: 51200

Tax Rate in your income slab is: 0.12

Tax calculated in income is: 182,400.36

TDS to be credited when filing annual income tax return:5,120.00

Total income in hand after taxes:1,332,482.64

Program execution time:7.86 seconds

PS C:\Users\Priyal> &

C:/Users/Priyal/AppData/Local/Programs/Python/Python313/python.exe "c:/Users/Priyal/OneDrive/Desktop/import time.py"

Please enter your income for tax to be calculated: 1000300

Enter if TDS paid: 210

No tax to be paid

TDS to be credited when filing annual income tax return:21.00

Total income in hand after taxes:1,000,279.00

Program execution time:6.95 seconds

PS C:\Users\Priyal>

SKILLS ACHIEVED:

1. Knowledge regarding python modules such as time.
2. Concept of adding if conditional statements.
3. Concept of creating a script using user input.
4. Use of multiplication to calculate tax.
5. Proper indentation block writing knowledge to avoid multiple same outputs.
